# Your agency's data stays your agency's.

SmartViewz handles the book of business you connect from Smart Office. Here is how it is protected. Our full security brief was prepared for Zinnia's integration review.

| OFFICES | SIGN-IN | AI | ACTIVITY |
|---|---|---|---|
| **Walled off** | **Two-step** | **Read-only** | **Audit trail** |
| enforced on the server | for every user | never trains on your data | append-only |

### Each office is walled off
A signed-in user can never reach another office's book.

### Each person sees only their part
Agents their book and downline, supervisors their team, owners the agency.

### Two-step sign-in
Every user can turn it on; owners can require it for the whole office.

### Changes confirmed by email
Password, phone and email-connection changes need a code sent to the registered address.

### Append-only audit trail
Sign-ins, views and changes are recorded in a log that can't be rewritten.

### AI that only reads
Scoped, read-only tools. Your data is never used to train models for anyone else.

### Encrypted in transit and at rest
TLS everywhere, on a managed database with row-level security.

### Locked-down browser policy
Signed-in pages block any script the app didn't issue.

**Have a security questionnaire? We'll walk you through it.**
See it on a real sample agency, then set it up on your own book in one call.
